SUMMARY

Highly motivated Information Engineer with over 2 years of experience in software development. Possesses excellent interpersonal skills and strong visualization abilities for effective communication and presentation of ideas. Demonstrated work ethic and dedication to achieving project goals. I am fluent in Arabic and English.

EDUCATION

* High School Diploma from Private School, Sharjah, UAE

* Bachelor's Degree in Informatics Engineering, International University of Science and Technology (IUST), Damascus, Syria

EXPERIENCE

Backend Developer | OneDoor | October 2025 – Jan 2026

* **Full-Stack E-Learning Platform (EU+):** Engineered a robust Course Management System (CMS) with a hierarchical curriculum structure. Integrated **Bunny Storage and Stream** to orchestrate a global media pipeline, leveraging **automated HLS transcoding** and **Edge Storage replication** to ensure high-availability content delivery for diverse geographic regions.

* **Scalable Video Infrastructure:** Engineered an **asynchronous pipeline** for resumable video uploads to **Bunny Stream**. Automated the end-to-end media lifecycle—from raw ingestion to **HLS transcoding**—effectively offloading 100% of video processing to the edge and reducing server CPU overhead by **60%**.

* **CI/CD & Containerization:** Designed and maintained CI/CD pipelines using GitLab CI, automating build, test, and deployment workflows. Containerized backend services with Docker and implemented automated image building, versioning, and deployment, enabling faster releases, consistent environments, and reduced deployment errors.

Backend Developer | No Name Group | July 2025 – October 2025

* **Backend Logistics Platform (Setalkel):** Developed a Laravel-based RESTful API powering a multi-platform ecosystem (Web, Admin, Mobile). Engineered a high-performance **Product Catalog** with complex variants and a **Role-Based Access Control (RBAC)** system for global agents.

* **Intelligent Containerization Engine:** Designed an automated shipping logic that calculates real-time container requirements based on **volumetric weight, dimensions, and thermal requirements** (Frozen vs. Dry). Developed an algorithm to optimize order splitting across multiple containers, ensuring logistical efficiency for large-scale international exports.

* **Dynamic Multi-Tier Pricing Engine:** Architected a sophisticated pricing matrix supporting **localized rates by country** and **negotiated agent-specific pricing**. Built a high-speed lookup system to resolve real-time unit costs based on user-tier permissions and regional tax/shipping overheads.

Backend Developer | Apps&more | August 2024 – December 2024

* **Maintained and deployed a distributed system of 30+ Go-based microservices** using **NATS (MTN Cash mobile)** as a high-speed message broker, achieving sub-100ms internal latency for complex payment flows.

* **Supported the operation and maintenance of a secure transaction pipeline** handling external integrations with MTN, SEP and POS systems via a centralized request registry and RSA-based authorization.

Cryptographic Security Operations: Managed and audited **asymmetric (RSA/ECC) request signing** protocols across the microservice mesh. Ensured secure inter-service communication by validating digital signatures within the NATS middleware, preventing unauthorized request injection and ensuring non-repudiation for all financial transactions.

PROJECTS

***- AstroClinics**

Description: A multi-tenant backend system for managing dental clinics, where each clinic operates independently with isolated data. The platform includes features for patient records, medical history, and treatment workflows, enabling doctors to track patient progress over time.

***- MTN Cash mobile**

Description: A microservices-based payment processing system designed for mobile financial services. The architecture employs containerized services to handle diverse payment operations including transaction processing, merchant management, balance operations, commission calculations, fraud detection, and integration with external payment providers.

***- EU+**

Description: RESTful backend API platform with course management, video streaming (Bunny Storage CDN and Streaming), phone-based OTP authentication, student enrollment, quizzes, and role-based access control. Features resumable uploads, Celery async processing, and scalable cloud architecture.

* - Setalkel

Description: Developed RESTful backend API for Setalkel platform, powering web application, admin dashboard, and mobile ordering app. Implemented product catalog with variants and categories, order management system with container-based shipping, multi-tier pricing supporting user-specific rates, role-based access control, Firebase push notifications, and analytics dashboard. [\[link\]](#)

* - ChatWithMe

Description: An AI-powered tool to automate the creation of CVs for clients, achieved a 92% accuracy rate in generating personalized and impactful CVs and streamlined the process of creating CVs, saving time and increasing efficiency.

Key Achievement: Showcased at FMEE Exhibition, Damascus University, [2024], recognized for innovation in automating professional document creation.

* - Reparo

Description: A backend-driven service marketplace designed to connect customers with skilled workers for home and office repair needs. The system handles the full lifecycle from service browsing to booking, tracking, and feedback — with a secure, role-based API architecture.

* - Sawqly

Description: A backend system designed for a service-based or marketing-oriented platform where businesses can promote offerings, customers can book them, and real-time interaction is optimized through smart backend design. [\[link\]](#)

SKILLS

*- **Languages & Frameworks:** PHP, Laravel, Java, Springboot, Spring cloud, Golang, Postgresql, MySQL.

*- **Development Tools:** Git, Postman, Gitlab CI/CD, Github actions, Docker (images, volumes, compose)

*- **IDE's:** Visual Studio Code, IntelliJ, PgAdmin, Cursor.
